***Technology Transition (T2) Plans should include a mix of products that vary according to platform/format, target audience, and length of time to use or read. Selected T2 products will be project-specific; the products listed above are examples of the types that can be considered.**

****The target audience will also be project specific. PM/RPM could be a weapons system platform manger or a technical warrant holder or the remedial project manager, but is the person or office that controls system engineering. The ESOH stakeholder could be the base environmental office or an engineer in charge of the current remedial activity or repair process.**
